

# Consistent results, great after care is key to cosmetic surgery results

When you're considering any type of plastic surgery, you want a doctor who has a reputation for consistent results, exceptional care and who is rated year after year as a top doctor in his field by his peers and the community at large. One such physician is Dr. George John Alexander.

In addition to his private practice, Dr. Alexander is the current Chief of Plastic Surgery at MountainView Hospital and was the founder and past chief of plastic surgery at Mike O'Callaghan Federal Hospital.

Dr. Alexander offers a full spectrum of plastic surgery procedures from facial plastic surgery to body contouring to breast reduction and augmentation.

"One of the newer offerings in breast augmentation is the high-profile design implant," said Dr. Alexander. "This gives a woman more cleavage and a more aesthetically pleasing result." It is an excellent implant for petite women.

No matter what procedure a patient undergoes, Dr. Alexander and his staff are committed to excellent patient care.

"We're very focused on precision pre-operative, operative and post-operative care," Dr. Alexander said.

Most procedures are performed in a hospital or state-of-the-art same day surgical facility. Both feature full advanced operating and recovery rooms. Intravenous sedation (twilight anesthesia) or general anesthesia is administered by only board-certified anesthesiologists. Additionally, the Dr. Alexander and Co. staff can arrange for after care in an elegant "hideaway" recovery hospital.

Dr. Alexander was voted a top Las Vegas doctor and has been listed in the Magazine of Summerlin in 2004 and 2005 and in Las Vegas Life Magazine in 1999, 2001, 2002 and 2003.

**George John Alexander, MD, FACS**
